Рубежный контроль по R-диагностике заболеваний органов дыхания

Уважаемые обучающиеся!

Каждый из вас должен интерпретировать R-снимки (всего 30) в ММ-презентации: назвать заболевание, его локализацию, если осложнение заболеваний – то указать какое. На снимках могут быть пневмония (очаговая, сегментарная, долевая), абсцесс легких I и II стадии, гангрена легких, плеврит, ХОБЛ и сходные с ними болезни легких, требующие дифференциальной диагностики (туберкулез и др.). Успехов в работе!
